

SUMMARY

AI/ML Engineer with B.Sc. and M.Sc. degrees in Data Science, combining 2+ years of healthcare data analytics and 1+ year of ML engineering experience in both academic and industry environments. Experience covers applied ML research, ML/LLM model training and fine-tuning, MLOps infrastructure for production AI services, and AI agent development for business needs. Interested in roles at the intersection of healthcare, applied research, and production ML engineering.

EXPERIENCE

AI/ML engineer LLMops <i>Atlanti AI (founded by an ex-Meta and ex-Amazon tech lead)</i>	<i>Oct 2025 – Present</i>
- Maintained MLOps infrastructure across multiple GPU servers, covering deployment and monitoring of ASR, LLM, and TTS models (FastAPI, LiteLLM, Docker Swarm, Traefik, and Grafana, Prometheus) - Optimized runtime inference for latency-throughput trade-offs (vLLM, faster-whisper, Orpheus TTS, and Locust) - Fine-tuned LLMs for Kazakh language using LoRA/QLoRA methods (Unsloth) - Build AI agents for business process automation, with evaluation, tracing, and monitoring (LangChain/LangGraph and Langfuse)	
Junior Researcher <i>AI Research Center at Astana IT University</i>	<i>Mar 2025 – Present</i>
- Developed ML models for EEG-based attention monitoring as part of NeuroPro.kz - Authored publications on EEG-based cognitive states and ML methods in Q1/Q2 international journals - Collaborated on patent-pending AI developments , working with neuroscientists	
Healthcare Data Analyst <i>National Research Center for Healthcare Development</i>	<i>Mar 2024 – Aug 2025</i>
- Managed and maintained national healthcare databases on MS SQL Server - Developed Power BI dashboards (view report) used by Ministers / Vice-Ministers of Healthcare of Kazakhstan - Increased department efficiency by developing web scraping and Excel automation program (view project), which saved 2-3 workdays per month for each of 8 employees	
Healthcare Data Analyst <i>Ryte.ai</i>	<i>Aug 2023 – Mar 2024</i>
- Designed database schemas and integrated external healthcare sources for two healthcare projects to ensure ML-ready datasets with pipelines documented in Azure - Prepared well-structured datasets in collaboration with Data Engineers, AI specialists, Data Curation, and QA teams - Analyzed large-scale healthcare datasets in Databricks (Python, SQL, PySpark), delivering accurate statistics and reports that enabled data-driven decision-making across teams and management. - Contributed to business process mapping (BPMN), customer journey analysis (CJM), and user story definition to align solutions with business needs.	

EDUCATION

Bachelor’s degree in Big Data Analytics Astana IT University	<i>Full Grant, GPA - 3.3</i>	<i>2020 – 2023</i>
Master’s degree in Applied Data Analytics Astana IT University	<i>Full Grant, GPA - 3.6</i>	<i>2023 – 2025</i>

PUBLICATIONS

Evolutionary Reinforcement Learning	<i>NumPy, Pandas, Matplotlib, PyTorch, PyGame</i>	GitHub link
- Publication and winning of III place (view certificate) at conference «2025 IEEE AITU: Digital Generation» - Built a simulation framework for decentralized multi-agent systems, where agents controlled by Neural Network evolved through genetic algorithms to optimize survival in a 2D grid environment		

TECHNICAL SKILLS

Programming	: Python, SQL, Docker and Docker Swarm, FastAPI, Streamlit
Machine Learning	: NumPy, Pandas, Scikit-learn, PyTorch, TensorFlow, LangChain NLP, Computer Vision
Data Engineering	: ETL, Power BI (Power Query, DAX), advanced Excel, VBA
Tools & Platforms	: Linux, Azure, AWS, Git, Figma, VS Code
Languages	: English (Upper-Intermediate), Russian (Native)
